SOUTHWEST ELASTO-GEL™ WHEELCHAIR CUSHIONS

Uniquely designed to reduce pressure and to assure correct positioning. The combination of a special resilient foam and the Elasto-Gel™ sheet allows efficient weight disbursement of ischials and coccyx. COVIDIEN/RESPIRATORY & MONITORING TRACHEAL TUBE - UNCUFFED

Wide range of pediatric sizes provides better fit even for premature infants. Distal tip reference lines and depth marks assist in proper placement. Thin, but strong tube wall provides maximum inner diameter for proper ventilation. Also available in precut lengths.

 86223 3.0mm Tracheal Tube, Uncuffed, Murphy, 10/bx

COVIDIEN/RESPIRATORY & MONITORING HI-LO® TRACHEAL TUBE

The Hi-Lo tracheal tube meets or exceeds the guidelines of the cuff criteria. Thin cuff conforms to uneven tracheal surfaces to create low pressure seal. Large cuff diameter of 1-1/2 times the average trachea maintains proper low-pressure seal during tracheal expansion and contraction. High cuff compliance lies close to tube when deflated and expands easily without herniation. Allows more efficient visualization of vocal cords during intubation/extubation. Large cuff resting volume together with long length reduces pressure against tracheal tissue. Offers better protection against aspiration. Low intracuff pressure doesn't restrict tracheal tissue blood flow. Reduces chance of tissue damage, even during long-term intubation.

ALLIED LIBERTY OXYGEN CONSERVER

Engages exactly and only when patient starts to breathe, and turns off when the cannula is removed from the face. The result is a conservation ratio of 5:1, which means the cylinder's oxygen supply will last up to five times longer. A flashing green light on the display panel confirms with each pulse that oxygen is being delivered and the unit is functioning properly. The built-in oxygen regulator features an all-brass construction, making it both long lasting and compliant with the latest safety codes set forth by NIOSH. Truly portable and powered by a single C battery. A red warning light will flash continually for 24-48 hours when it's time for the battery to be replaced. This safety feature makes traveling that much more secure, even when taking extended trips abroad. It weighs just 18 oz. A convenient toggle switch allows patient to select the continuous flow mode. Located at the bottom of the unit, the switch is designed to avoid accidental mode changing.
