## MIDMARK SONICLEAN® ULTRASONIC CLEANER

No one will argue that ultrasonic cleaning is the fastest, most consistent and safest method of cleaning instruments and components. But, because ultrasonic cleaners emit a high pitched sound, no one ever accused them of being quiet until now. Other ultrasonic cleaners use a standard, slim wafer transducer that limits the maximum sound pressure that can be generated 2-3 watt/sq in. An industrial type ultrasonic stack transducer that results in a cleaner capable of reaching 12-15 watts/sq in. This superior acoustic pressure generated by the stack transducer, coupled with Soniclean's Overlapping Wave Frequency (OWF) technology, produces powerful cavitation. More power in the tank translates to cleaning your instruments quicker and more efficiently, internal safety baskets sold separately. CSA, TUV, FCC and CE; ISO 9001 registered.
