COVIDIEN/KENDALL DEVON HANDS FREE TRANSFER MAGNETIC DRAPES

Disposable magnetic drapes are specifically designed to attract and hold surgical instruments on the sterile field. Minimizes risk of percutaneous injuries and provides safe, effective instrument transfer in the OR. Flexible drapes conform to any shape with non-slip foam backing for secure positioning. Raised magnets provide strong holding power while allowing instruments to be easily grasped. Drapes with patented "stays" can be shaped to form a "safety trough" along the edges. Neutral Zone magnetic drapes have a convenient, built-in, non-magnetic area to hold or safely transfer sharp instruments. Kidney shape basin and rectangular tray easily attach to magnetic drapes.

- 31140612 Transfer Magnetic Drape, 10" x 16", w/Magnets, Stays & One Neutral Zone, 30/cs

COVIDIEN/RESPIRATORY & MONITORING CAREDRAPE WARMING BLANKETS

These blankets are specifically designed to withstand the demands of the OR environment. Made of a strong, two-ply material, they resist tears, punctures and fluids, yet are soft and flexible to permit custom draping. These three versatile blankets meet the needs of most surgical procedures, reducing inventory to save you money.

COVIDIEN/RESPIRATORY & MONITORING CAREDRAPE CARDIAC BLANKET - STERILE

This specialized blanket can be used for cardio-thoracic surgical procedures to regulate patient temperature perioperatively. Two perforated slits allow easy access to the groin area, while the unique design minimizes air distribution at the patient's feet to maximize temperature regulation. A longer connector and inlet shield protects the sterile environment.

COVIDIEN/RESPIRATORY & MONITORING CAREQUILT® FULL-BODY WARMING BLANKET

The CareQuilt® Convention Warming Blankets features a light, strong material and a low profile that contours closely to the patient without billowing up. Adult blankets feature specially designed slits for easy access to chest and feet as well as a scoop neck cut-out and tuckable shoulder flaps for improved patient warming. These blankets provide efficient, full-body warming for your adult and pediatric patients.

AARON 800EU™ HIGH FREQUENCY DESICCATOR

Utilizes a large rotary dial for rapid and precise power control. Output is displayed numerically via an unobstructed easy-to-read LED. In addition, power may be adjusted in one-tenth increments in the often used under 10 watt range. Unlike other available units, high and low outputs have been combined into a single port. By incorporating the latest in chip technology and reducing the number of internal parts, less internal heat is generated, adding to the life of each instrument. The handpiece holds all standard 3/32" electrodes securely. When not in use, the handpiece rests conveniently in a holder specifically designed to reduce contact with potentially contaminated areas outside the sterile field. The handpiece is both autoclavable and cold sterilizable. The unit may be either wall-mounted or attached to a sturdy five-caster mobile stand.

COVIDIEN/US SURGICAL VALLEYLAB EDGE™ COATED ELECTRODES

High performance cutting and coagulation with easy cleaning. Standard 0.24cm (3/32 inch) diameter shaft. Provides uncompromised cut performance throughout a variety of procedures, no matter what type of tissue. EDGE™ coated blade and coated needle electrodes provide cut performance like stainless steel, but with a clean advantage. No scraping required. Durable and bendable without compromising the integrity of the coating.

COVIDIEN/US SURGICAL VALLEYLAB LIGASURE™ VESSEL SEALING SYSTEM

Patented technology provides unique combination of pressure and energy to create vessel fusion, leaving no foreign material behind. Permanently fuses tissue bundles and vessels up to and including 7 mm in diameter without dissection or isolation. Seals withstand 3x normal systolic blood pressure. Reduced thermal spread. Virtually no sticking or charring. Potential time savings compared to suture. Reduces risk of needle stick injuries.

COVIDIEN/US SURGICAL VALLEYLAB REUSABLE ELECTRODES AND EXTENSIONS

Standard 2.4mm (3/32 inch) diameter shaft. Sterilization: Ethylene oxide gas (EtO) or steam autoclave. Reusable Electrodes are manufactured of high quality surgical grade materials in ball, blade, needle, angled ball, tungsten loop and conization styles. Reusable Electrode Extensions provide improved access to deep cavities and other hard-to-reach surgical sites. Can be used with ball, blade and needle electrodes in handswitching and footswitching Valleylab pencils. Available in 13cm or 34cm lengths.

COVIDIEN/US SURGICAL AUTOSONIX™ ULTRASONIC COAGULATION SYSTEM

The AutoSonix™ System is a system of electromechanical components designed to ultrasonically transect and coagulate a broad range of soft tissue. The system includes a Generator that produces a 55.5 kHz electrical signal and feeds that signal via the patient cable to a piezoelectric crystal stack mounted in the autoclavable transducer.

CRYOSURGERY VERRUCA-FREEZE® CLINICAL FREEZING SYSTEM

This convenient alternative to liquid nitrogen effectively treats benign skin lesions and is the coldest portable cryosurgical system on the market, freezing at 670°C (-94°F). Minimum 5 Year shelf life. Procedure takes 2-3 minutes. Bloodless, less exposure to HIV and Hepatitis B. Self-Anesthetizing: No needles, sutures or dressings. No medical waste. No capital equipment costs. No expensive attachments or delivery devices. Positive shut-off valve stops spray instantly. Nonflammable and odorless. Uses two forms of application: clear, limiting cones that allow cryogen to directly contact the skin and improved CryoBuds™ for hard-to-reach areas.

COVIDIEN/KENDALL CURITY THORACENTESIS TRAYS

Fully automatic two-way valve requires only simple pulling and pushing of the syringe plunger for automatic withdrawal and diversion of pleural fluid, eliminating the necessity for constant manipulation. Aspirating needle is equipped with a unique depth clamp that adjusts easily to the desired level of insertion and then locks into place, reducing the risk of over-penetration of the needle into the chest cavity. Once assembled, the closed system allows pleural fluid to be aspirated, and collected with reduced risk of external contamination. Sterile Contents; Prep Tray: (1) Underpad, (1) Prepping Applicator Sponge, (1) Removable Prep Tray; Procedure Tray: (3) 12-Ply 3" x 3" Gauze Sponges, (1) 25ga x 5/8" MONOJECT MAGELLAN Safety Needle, (1) 21ga x 1 1/2" MONOJECT MAGELLAN Safety Needle, (1) Plastic Syringe, 5cc Luer Slip, (1) Plastic Syringe, 50cc Luer Lock, (1) Two-Way Control Valve Assembly, (3) 8cc Specimen Vials & Caps, (1) Collection Bag, 1500cc with Quick Disconnect, (1) Fenestrated Drape, (1) 1" x 3" CURITY Adhesive Bandage.

COVIDIEN/US SURGICAL IDERMIL® TOPICAL ADHESIVE

Idermil® tissue adhesive is for the closure of topical skin incisions including laparoscopic incisions, and trauma-induced lacerations in areas of low skin tension that are simple, thoroughly cleansed, and have easily approximated skin edges. Studies have shown that Idermil® tissue adhesive may act as a barrier to microbial penetration when the adhesive film remains unbroken. Idermil® tissue adhesive may be used in conjunction with, but not in place of deep dermal stitches.

ETHICON ETHIBOND™ EXCEL POLYESTER SUTURES

A nonabsorbable, braided, sterile, surgical suture composed of poly (ethylene, terephthalate). It is prepared from fibers of high molecular weight, long-chain, linear polyesters having recurrent aromatic rings as an integral component. It's uniformly coated with polybutylate or poly. The highly adherent coating is a relatively nonreactive nonabsorbable compound which acts as a lubricant to mechanically improve the physical properties of the uncoated suture by improving handling qualities as contrasted to the braided, uncoated fiber. They are braided for optimal handling properties, and for good visibility in the surgical field and are dyed green.

ETHICON MERSILENE™ POLYESTER FIBER SUTURES

Mersilene polyester fiber suture provides precise, consistent suture tension. They minimize breakage and virtually eliminate the need to remove irritating suture fragments post-operatively. Frequent uses: general soft tissue approximation and/or ligation, including use in cardiovascular, ophthalmic and neurological procedures.

**ETHICON MONOCRYL™ (POLIGLECAPRONE 25) SUTURES**

For unprecedented monofilament pliability and smooth passage through tissue. Indicated for use in general soft tissue approximation and/or ligation, but not for use in cardiovascular or neurological tissues, microsurgery, or ophthalmic surgery.

ETHICON PDS II™ (POLYDIOXANONE) SUTURES

For the longest lasting absorbable monofilament wound support with outstanding pliability. Indicated for use in all types of soft tissue approximation, including use in pediatric cardiovascular tissue where growth is expected to occur, and ophthalmic surgery. Not indicated in adult cardiovascular tissue, microsurgery, or neural tissue.

**ETHICON SURGICAL GUT SUTURE - CHROMIC**

An absorbable, sterile surgical suture composed of purified connective tissue (mostly collagen) derived from either the serosal layer of beef (bovine) or the submucosal fibrous layer of sheep (ovine) intestines. Surgical gut sutures are available in plain or chromic. Chromic gut is processed to provide greater resistance to absorption. Surgical gut is packaged in tubing fluid. Blue dyed chromic gut suture is also available. Surgical gut suture meets all requirements established by the U.S. Pharmacopeia (U.S.P) for absorbable surgical sutures.

ETHICON VICRYL™ PLUS COATED ANTIBACTERIAL SUTURES

The first and only suture to inhibit bacterial colonization of the suture. Contains Irgacare MP, a pure form of Triclosan - a proven, broad-spectrum antibacterial used effectively in consumer products for more than 30 years. Creates a zone of inhibition, which prevents bacterial colonization by the pathogens that most often cause surgical site infections. For use in general soft tissue approximation and/or ligation, except for ophthalmic, cardiovascular and neurological tissues. This suture, being absorbable, should not be used where extended approximation of tissue under stress is required. Should not be used in patients with known allergic reactions to Irgacare MP (triclosan).

LOOK POLYSYN FA™ FAST ABSORBING POLYGLYCOLIC SUTURES

Designed for short-term (7-10 days), low-stress wound support. Sterile, undyed, braided polyglycolic acid sutures are non-antigenic and non-pyrogenic for little tissue reaction. Suture diameter is matched to diameter of quality, precision Sharp point needles for smooth penetration and less tissue trauma. High initial strength, 50% strength at 5 days, 0% at 14 days. Essentially absorbed at 42 days.

LOOK SHARPOINT DERMAGLIDE™ COSMETIC SURGERY SUTURES

The ultra-sharp, non-glare needle and closely matched-diameter suture were designed specifically to minimize trauma, suture line bleeding and resulting scarring. Made of specialty stainless steel wire, the needle is precisely tempered for hardness and tensile strength so it holds its fine edge pass after pass and glides exactly as guided. The tip is a long-taper, precision-faceted diamond shape. Its four ultra sharp edges are formed using a grindless, proprietary process. Designed to easily penetrate highly elastic dermal tissue without tenting, drag, or unwanted cutting of the periphery. Non-glare finish make it easier to see exactly where it is placed in the tissue. Unique swage channel needle/suture union assures the suture remains attached until it is ready to cut. Transparent packaging and large legible type speeds proper identification. Extra-long pull-tabs on the package simplify gloved-handling. The package's carrier pad provides maximum needle-tip protection and prevents suture tangling. It also offers a convenient needle park during surgery.

AESCULAP PREMILENE® SUTURES

A synthetic non-absorbable monofilament suture made of polypropylene. They are indicated for use in general soft tissue approximation and/or ligation, including use in cardiovascular, ophthalmic and neurological procedures. Available in direct-dispense packing (DDP) and in a LongPack presentation, minimizing memory effect.

AESCULAP SAFIL® SUTURES

A mid-term braided and coated synthetic absorbable suture made of pure polyglycolic acid. It degrades by hydrolysis and provides predictable and reliable absorption.

COVIDIEN/US SURGICAL CAPROSYN™ MONOFILAMENT ABSORBABLE SUTURES

Prepared from a synthetic polyester Polyglytone 6211, composed of glycolide, caprolactone, trimethylene carbonate and lactide. The advanced extrusion process of the molecule of Polyglytone 6211 gives the suture strong and secure wound approximation during the critical wound healing period; predictable absorption profile; excellent knot security; excellent handling. For use in general soft tissue approximation and/or ligation, but not for use in cardiovascular or neurological surgery, microsurgery or ophthalmic surgery.

ALLIED OPTIVAC® G180 AC/DC PORTABLE SUCTION UNIT

Run time operation on fully-charged battery for approximately 3 hours at maximum vacuum. 25-550mm Hg vacuum range, coupled with greater than 30lpm flow, provides powerful suction for faster aspiration. Fully chargeable in 8 hours. Will run on AC power even with a low battery. Long-life rechargeable battery eliminates the need for frequent replacement. Sealed water-resistant unit is easy to clean, and minimizes potential contamination or damage to the compressor and battery. Control panel at an angle for easy viewing. Quality-engineered thermoplastic provides impact resistance and durability. 3-year warranty on the unit and 1 year on the battery.

PERSONNA® PREP BLADE

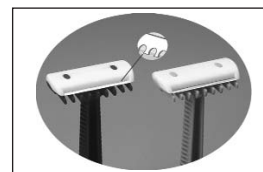

Personna Prep Blades are available in both single edge and double edge. Each blade is carefully ground and honed, providing added sharpness, edge retention characteristics, and corrosion resistance. The cutting edges of each blade have also been Comfort-Coated® for super smooth shaves. The double edge blades are available in either a standard, double-sided blade or with the added security of Face Guard®. Designed to reduce the trauma of scraping and chafing, the FaceGuard features a bolt-in safety profile on the edge, which positions the blade for optimum shaving. This also greatly reduces the chances of the edge contacting the skin, so there is less necking and, subsequently, a lower risk of infection. When the standard double-sided blades are used in surgical procedures. The result is a cleaner, smoother, more precise incision, with less trauma.

AARON SURCH-LITE™ OROTRACHEAL STYLET

This lighted stylet aids in proper placement of endotracheal tubes without directly visualizing the vocal cords. SLOT and NLOT come with a sliding adaptor that allows the light to be used with many different size tubes. Smaller PDOT fits 4.5 tube or 4.0 with lubrication. Includes a protective coating over the entire neck assembly and bulb housing for extra safety.

COVIDIEN/RESPIRATORY & MONITORING BRONCHO-CATH® ENDOBRONCHIAL TUBE

Double lumen design permits an airtight seal of the trachea and one bronchus. Color-coded cuff, pilot balloons, and proximal lumens help identify bronchial and tracheal lumens. Supplied with stylet in place to help tube maintain shape for easier intubation. Packaged with two double swivel connectors, suction ports, Carlens tube adapter and two extra-long suction catheters. Smooth transition inner lumens allow easy passage of bronchoscopes. Standard features: high-volume low-pressure cuff, atraumatic molded tip, radiopaque marker, pilot balloons with mechanical self-sealing valve. Large ventilatory lumens feature small O.D. Bronchial tip modification simplify intubation and help prevent bronchial tip occlusion.
